

Presentation Brief

This briefing template for presentations is designed to contain the brief and practical arrangements for any WMG presentation assessment component.

Module Title & Code	WM9B7-15 Artificial Intelligence & Deep Learning
Component Title	Presentation
Module Leader	Dr Leonardo Alves Dias
Module Tutor	See above
Assessment Title	Group Assessment
Weighting (%)	30%
Date of presentation briefing	WC 16 th March 2026
Date of presentation assessment	WC 20 th April 2026
Practical Arrangements	1. The presentation slides and Jupyter notebook must be uploaded to Moodle after the presentation in a submission folder under the “Group Assessment” section. Please ensure your file is clearly named using the following format: “<i>GroupName_Title_Date</i>”. The presentation file format should be either .pptx or .pdf, and the notebook should be .ipynb. 2. All students are expected to attend the full session to support peer feedback and collaborative learning. 3. Each student will have to complete a peer review form on Moodle. 4. Live presentations may be recorded for moderation purposes.
Expectations	Formal presentation with two markers
Marks return date	
Mechanism for providing feedback	Verbal feedback will be given in the classroom immediately after the presentation. A written summary of the feedback will be provided along with the marks on Tabula.

Presentation Brief

Don't use the content from this assessment in your dissertation

You are part of an AI consultancy group contracted by IntelliSys Ltd., an established Intelligent Systems Company that provides sensor-driven and software-based solutions to clients in a variety of sectors, including healthcare, finance, environmental monitoring, transportation and mobility, agriculture, and digital media/language processing. Although IntelliSys has extensive domain knowledge and system integration expertise, it currently lacks the in-house capability to integrate Artificial Intelligence (AI) and Deep Learning (DL) into its services.

To address this gap, IntelliSys has commissioned your consultancy team to explore and demonstrate how deep learning can enhance its offerings. Your team's goal is to design a high-quality prototype and provide practical recommendations on how IntelliSys can adopt AI responsibly and effectively within one of its client domains.

To meet the client's expectations, your consultancy team must:

- Identify, select, and discuss a specific real-world problem relevant to one of IntelliSys's client sectors and propose a deep learning-based approach (design, implement, and evaluate an appropriate DL model) that your group would recommend for solving it. Clearly explain your design decisions and evaluate your model performance. Also, include a discussion on interpretability to demonstrate transparency and ethical awareness.
- Provide actionable technical recommendations to help IntelliSys Ltd. extend its services by adopting AI capabilities, discuss potential risks or limitations of your deployed solution and propose potential mitigating solutions.

To support your work, you may select datasets provided on Moodle or propose an alternative dataset relevant to your chosen sector (subject to approval). You are encouraged to be creative and thoughtful in your solution design, while maintaining rigour in your technical work and clarity in your client-facing communication.

Your group must demonstrate collaborative working by coordinating effectively as a team to divide responsibilities and integrate your contributions. Ensure that each group member contributes meaningfully to the structure and usability of the code, and the presentation delivery. Ensure your communication is well-targeted to both technical and non-technical audiences and shows professionalism in how the group manages the consultancy brief.

Your final deliverable will be a 15-minute group presentation supported by professional-quality slides and a well-documented and reproducible Jupyter notebook, delivered to an audience that includes both peers and tutors acting as company stakeholders. You are expected to demonstrate technical proficiency, critical thinking, teamwork, and effective communication throughout.

References from both academic and commercial sources should be included. Ensure your presentation is clear, objective, and well-structured, adhering to academic standards.

Additional documents will be provided during the module on Moodle, as well as an FAQ.

You can use AI tools in your workflow. However, your application must clearly reflect your

own reasoning and decision-making, critical evaluation, original coding effort, design and implementation decisions. Although AI assistance is allowed during code development, you must adapt and extend any AI-generated content to reflect your understanding and ownership of the work. This aims to bridge applied AI development with responsible practice, ethical reasoning, and awareness of industry and research trends.

Duration	20 minutes, including questions and feedback from tutors and peers. While not every student must speak to the client and tutors during the presentation, all group members must be present and have made substantial contributions to the project. Ensure that all team members contribute to the presentation to demonstrate collaborative work. Attendance at the presentation is mandatory for every member of the group. Any student who fails to attend their group's live presentation, arrives after it has commenced, or does not meaningfully contribute to the group's overall presentation effort will receive a mark of zero (0) for this assessment.
-----------------	--

ARTIFICIAL INTELLIGENCE (AI)

AI Scale (Please copy and paste this tick '√' into the appropriate box)		NO AI	You must not use AI at any point during the assessment. You must demonstrate your core skills and knowledge.
		AI PLANNING	You may use AI for planning, idea development, and research. Your final submission should show how you have developed and refined these ideas.
	√	AI COLLABORATION	You may use AI to assist with specific tasks such as drafting text, refining and evaluating your work. You must critically evaluate and modify any AI-generated content you use.
		FULL AI	You may use AI extensively throughout your work either as you wish, or as specifically directed in your assessment. Focus on directing AI to achieve your goals while demonstrating your critical thinking.
		AI EXPLORATION	You should use AI creatively to solve the task.

AI Policy	Unauthorised and undisclosed use of Artificial Intelligence may result in a finding of Academic Misconduct and an academic sanction under Regulation 11 . Guidance for WMG student on the use of Artificial Intelligence can be found here .
Marking Scale	PGT 0-100 marking scale
Module Learning Outcomes (numbered)	LO1. Critically evaluate and explain the key differences between traditional machine learning and deep learning approaches. LO2. Critically evaluate deep learning and artificial intelligence solutions and their implications. LO3. Demonstrate an understanding of emerging trends and research development in AI. LO4. Design and evaluate deep learning models for practical applications. LO5. Collaborate effectively as part of a group to develop and communicate a practical AI solution by presenting findings through reproducible code, visualisations, or technical reporting.
Learning Outcomes assessed in this Assessment (numbered)	LO4 and LO5
Learning Outcomes	Please remember that you must meet all Learning Outcomes to achieve a pass mark.
GROUP ASSESSMENT ONLY (delete row if not applicable): Peer adjustment process	This work is subject to peer adjustment, which is a mechanism for ensuring every student is allocated a unique mark in respect of their contribution to the outcome of the assessment. This means that you and your group members will be asked to rate each other's individual contribution to the final submission, after the assessment has been completed. You have until Friday of week 4 to submit your peer review form on Moodle. Following submission of your peer adjustment ratings, a standard formula is applied to calculate the final assessment mark. The adjustment will contribute a maximum of 20% towards that assessment component mark, and the adjustment cannot result in a fail mark. If a student does not engage at all within a group such that they contribute nothing towards a group assessment, this can lead to a mark of zero for this group assessment. Students who fail to submit their peer assessment 'scores' by the deadline will have their marks deducted by 20% as a consequence.
Resit Policy	If you fail this module and/or component, the University allows students to remedy failure (within certain limits). Decisions to authorise resits are made by Exam Boards. These will be issued at specific times of the year, depending on your

	programme of study. More information can be found from your programme office if you are concerned. If this is already a resit attempt, this means you will not be eligible for an additional attempt. The University allows as standard a maximum of two attempts on any assessment (i.e. only one resit). Students can only have a third attempt under exceptional circumstances via a Mitigating Circumstances Panel decision.
Retention of Drafts & Records	Please ensure that you retain any drafts of your work, associated notes, records of research should they be required by the marker or moderator. You do not need to submit these, but they should be retained until after the end of your registration.

Where to get help:

1. Talk to your module tutor if you do not understand the question or are unsure as to exactly what is required.
2. There are also numerous online courses provided by the University library to help in academic referencing, writing, avoiding plagiarism and a number of other useful resources. <https://warwick.ac.uk/services/library/students/your-library-online/>
3. If you have a problem with your wellbeing, it is important that you contact your personal tutor or wellbeing support services <https://warwick.ac.uk/services/wss>

Marking Guidelines:

Learning Outcome or Evaluative Criteria	80+ Outstanding	70-79 Distinction	60-69 Good Pass	50-59 Pass	40-49 Marginal Fail	<40 Fail
LO4. Design and evaluate deep learning models for practical applications	An exemplary answer, showing complete mastery of the learning outcome, with an exceptionally developed and mature ability to analyse, synthesise and apply concepts, models, and techniques. All requirements of the learning outcome are exceeded, and the answer is free from errors. The answer demonstrates originality of thought, with strong critical reflection and the ability to tackle issues not previously encountered. Ideas are explained with great lucidity and in an extremely structured manner. Technically outstanding, state-of-the-art or creative model with deep insight into design decisions, performance, and limitations. Evaluation is	An excellent answer, showing mastery of the learning outcome, with a highly developed and mature ability to analyse, synthesise and apply concepts, models, and techniques. All requirements of the learning outcome are covered, and work is free from all but very minor errors. There is good critical reflection and the ability to tackle issues not previously encountered. Ideas are explained very clearly and in a highly structured manner. Well-structured model with strong rationale, thoughtful design, and insightful evaluation. Includes	A strong answer, showing a sound grasp of the learning outcome and a skillful attempt at analysis, synthesis and application of concepts, models, and techniques. All requirements of the learning outcome are covered, but there may be some minor errors. There is some critical reflection, and a reasonable attempt is made to tackle issues not previously encountered. Ideas are explained clearly and in a well organised manner, with some minor exceptions. Model is appropriate, well-justified, and reasonably tuned. Evaluation is	A satisfactory answer, showing a grasp of the learning outcome but analysis, synthesis and application of concepts, models and techniques is mechanical, with a heavy reliance on course materials. The requirements of the learning outcome are covered but with little or no critical reflection and limited ability to tackle issues not previously encountered. Ideas are explained adequately but with some confusion and lack of organisation. Model is functional and appropriate to the task. Justification and evaluation are adequate, though may lack depth or rigour.	An unsatisfactory answer. The learning outcome is not met, but it would not take too much to meet it. There is a weak attempt at analysis, synthesis and application of concepts, models, and techniques. Only some of the requirements of the learning outcome are covered. Inability to reflect critically and difficulty in beginning to address issues not previously encountered. Ideas are poorly explained and organised. Limited or partially implemented model with weak	An inadequate answer and there are extremely serious gaps in knowledge and many areas of confusion. Few or none of the requirements of the learning outcome are covered. There is a lack of serious engagement with the learning outcome and there is no evidence that issues not previously encountered can be addressed. The levels of expression and organisation in the work are very inadequate. Model is absent, fundamentally flawed, or shows serious technical misunderstandings. No evaluation or

	rigorous and clearly supports claims. An exemplary synthesis of technical findings into clear, tailored business recommendations. Anticipates real-world deployment issues with mature risk management. Code demonstrates exemplary clarity, modularity, and polish. Includes advanced features such as automation, testing, or deployment readiness. Sophisticated use of visualisations and interpretability. Ethical analysis is deep, contextualised, and linked to deployment scenarios.	interpretability and ethical awareness. High-quality, clearly contextualised recommendations with well-reasoned risk assessment and realistic mitigation strategies. Highly professional, readable, and reproducible code. Follows best practices in documentation and versioning. Effective visual storytelling with clear discussion on interpretability. Ethical dimensions discussed with insight.	thorough with relevant metrics and some interpretability. Recommendations are relevant and feasible, supported by evaluation. Risks and mitigation are discussed with some insight. Well-organised and reproducible codebase. Modular functions, comments, and clean structure evident. Appropriate visualisations and interpretability are well considered. Ethical considerations are reasonably addressed. Work is well-presented and meets academic standards. Consistent referencing and formatting.	Provides appropriate recommendations with some awareness of implementation considerations and basic risk discussion. Code is functional and mostly reproducible. Basic modularity and documentation included. Includes some visual outputs. Ethical issues or interpretability techniques are acknowledged. Acceptable structure and tone. Academic conventions are generally followed. Referencing is present but may lack consistency.	justification. Evaluation is basic or inconsistent. Errors present. Recommendations are vague, poorly supported, or too generic. Risk considerations are limited or superficial. Code runs with support but lacks structure, clarity, or documentation. Errors or inconsistencies present. Minimal or inappropriate visualisation. Ethical issues mentioned briefly with limited understanding. Presentation/report lacks polish. Referencing inconsistent or incomplete. Gaps in academic standards.	inappropriate metrics used. Recommendations are missing, irrelevant, or technically incorrect. Risks and solutions not addressed. Code is missing, non-functional, or disorganised. Cannot be run or interpreted. No visualisation or interpretability. Ethical issues ignored or misunderstood. Work is unprofessional, disorganised, or shows signs of misconduct. Poor referencing or none.
LO5. Collaborate effectively as part of a group to develop and communicate a practical AI solution by presenting findings through	An exemplary answer, showing complete mastery of the learning outcome, with an exceptionally developed and mature ability to analyse, synthesise and apply	An excellent answer, showing mastery of the learning outcome, with a highly developed and mature ability to analyse, synthesise	A strong answer, showing a sound grasp of the learning outcome and a skillful attempt at analysis, synthesis and application of	A satisfactory answer, showing a grasp of the learning outcome but analysis, synthesis and application of concepts, models	An unsatisfactory answer. The learning outcome is not met, but it would not take too much to meet it. There is a weak	An inadequate answer and there are extremely serious gaps in knowledge and many areas of confusion.

reproducible code, visualisations, or technical reporting	concepts, models, and techniques. All requirements of the learning outcome are exceeded, and the answer is free from errors. The answer demonstrates originality of thought, with strong critical reflection and the ability to tackle issues not previously encountered. Ideas are explained with great lucidity and in an extremely structured manner. Exemplary team performance. Strong synergy, innovation in collaborative practices, and evidence of mutual support and leadership. Outstanding communication—engaging, precise, and persuasive. Demonstrates command of narrative, clarity of visuals, and sensitivity to both technical and non-technical stakeholders. Exceptionally professional and polished. Work could be used in a real-world consultancy setting.	and apply concepts, models, and techniques. All requirements of the learning outcome are covered, and work is free from all but very minor errors. There is good critical reflection and the ability to tackle issues not previously encountered. Ideas are explained very clearly and in a highly structured manner. Highly effective team collaboration. Strong integration, shared voice, and professionalism evident throughout. Highly effective communication of technical content with strong visual support, narrative structure, and audience targeting. Highly professional in appearance and tone. Accurate referencing, logical	concepts, models, and techniques. All requirements of the learning outcome are covered, but there may be some minor errors. There is some critical reflection, and a reasonable attempt is made to tackle issues not previously encountered. Ideas are explained clearly and in a well organised manner, with some minor exceptions. Good collaboration with clear task division and coherent group effort. Integration across code and presentation is effective. Clear and well-structured communication tailored to client and technical audiences. Professional and accessible. Work is well-	and techniques is mechanical, with a heavy reliance on course materials. The requirements of the learning outcome are covered but with little or no critical reflection and limited ability to tackle issues not previously encountered. Ideas are explained adequately but with some confusion and lack of organisation. Team collaborated reasonably with fair contribution across members. Basic integration and shared responsibility. Communicates findings adequately to a general audience. Slides and reporting are acceptable but could be improved in clarity or depth. Acceptable structure and tone. Academic conventions generally followed. Referencing present but may lack	attempt at analysis, synthesis and application of concepts, models, and techniques. Only some of the requirements of the learning outcome are covered. Inability to reflect critically and difficulty in beginning to address issues not previously encountered. Ideas are poorly explained and organised. Team attempted collaboration but demonstrated minimal coordination. Weak integration across deliverables. Communication is weak or inconsistent. Slides, narrative, or explanations may be incomplete or confusing. Presentation/report lacks polish. Referencing inconsistent or	Few or none of the requirements of the learning outcome are covered. There is a lack of serious engagement with the learning outcome and there is no evidence that issues not previously encountered can be addressed. The levels of expression and organisation in the work are very inadequate. Clear evidence of poor collaboration. Disjointed work, uneven contribution, or unresolved conflict. Presentation/report lacks clarity, coherence, or key content. Unsuitable for intended audience. Work is unprofessional, disorganised, or shows signs of misconduct. Poor referencing or none.
